Shrimp Squats: you can hold on to something for balance and support of needed or use a light dumbbell to counter balance the weight in front. You can also bring the floor closer to you but placing a block / books on the ground for your knee to touch. Really focus on controlling this movement Prone Single Leg Extensions: Only sit back as far as your body will allow. I want you to really challenge yourself here, minimise the rotation and keep working leg straight. *Pay attention to the Tempos on these exercises.
